

## Experience the *simplicity* of ready-built, customizable templates *tailored to glaucoma specialty needs*

### GLAUCOMA-SPECIFIC PROFILE

- **Increase charting efficiency** with a built-in customizable glaucoma profile that populates exam findings.
- **A built-in glaucoma flowsheet** allows greater visibility into intraocular pressure medications and other relevant information
- **A configurable and dynamic table** organizes and presents key data elements in a concise view—all in one consolidated place.

### PROBLEM-DRIVEN WORKFLOWS

**Improve documentation accuracy** with problem-driven workflows that automatically generate diagnosis-based findings within the chart.

### DIAGNOSTIC TESTING

**Save time with built-in PACs integration** that gives clinical staff the ability to complete diagnostic orders without having to leave the chart. A consolidated view of information also allows for side-by-side comparisons and the ability to perform interpretations.

### PATIENT DATA, IMAGING, AND BACKGROUND

**Easily view historical patient data** throughout the chart including diagnoses, exam findings, refractions, and past IOP readings. Review associated key medication and procedure data points, giving you the ability to see how patients trend over time.

### REFERRALS AND SHARED PATIENT CARE

**Easily develop and strengthen your network** for referrals and the sharing of pertinent HIPAA-compliant patient information. Once a patient is referred, correspondence between practitioners is easy. Updates and letters are automatically generated and can be sent at the end of every encounter.

### GLAUCOMA SURGERY PLANNER

Bridge the gap between chart review and surgical prep workflow to:

- **Access surgery details** and view procedure completion dates within a patient's chart
- **Reduce the amount of transcription needed** from the clinic chart to the surgery summary that goes to the ASC
- **Ensure coordination and hand-offs are seamless** so all relevant information is captured
- **Confirm completion** of preliminary tasks and post-operative documents
- **Track surgeries at every phase** of the process all in one place
- **Integration with third-party surgical planners.** Nextech integrates with the Veracity surgical planner to easily create surgical plans in Veracity and allow post-operative documents to be received into the patient's record in the EHR.
