

Cloud computing offers a simple, cost-effective solution that supports corporate growth and takes the stress out of data management.

BENEFITS OF CLOUD COMPUTING

Monthly Subscription

Avoid the significant upfront financial investment required for implementing an on-premise solution. Cloud offerings are available for an affordable monthly subscription fee with minimal upfront costs.

Flexible Accessibility

Access your applications and patient records anytime, anywhere via a secure internet connection, liberating you from the confines of a physical location.

Scalability & Growth

Cloud solutions support continued practice growth, providing you with the ability to manage as much or as little data as your practice requires without increasing your data management costs.

Minimal IT Costs

Cloud-based solutions eliminate costly IT expenses such as building out an onsite infrastructure, upgrading servers and routine maintenance, all of which eat away at practice profitability.

Maintenance Free

Since no onsite infrastructure is required, all related maintenance tasks are handled by the cloud provider, saving your staff time and allowing them to focus on clinical functions.

Automatic Updates

Software updates automatically, requiring little to no interruption or downtime. This also ensures staff have access to the latest features and enhancements, which automatically deploy to your practice.

Nextech maintains a robust and secure cloud platform, with automated updates, frequent backups for quick data recovery and **99.9% uninterrupted uptime availability**.

ENSURING CLOUD SECURITY

Tested & Proven Data Security

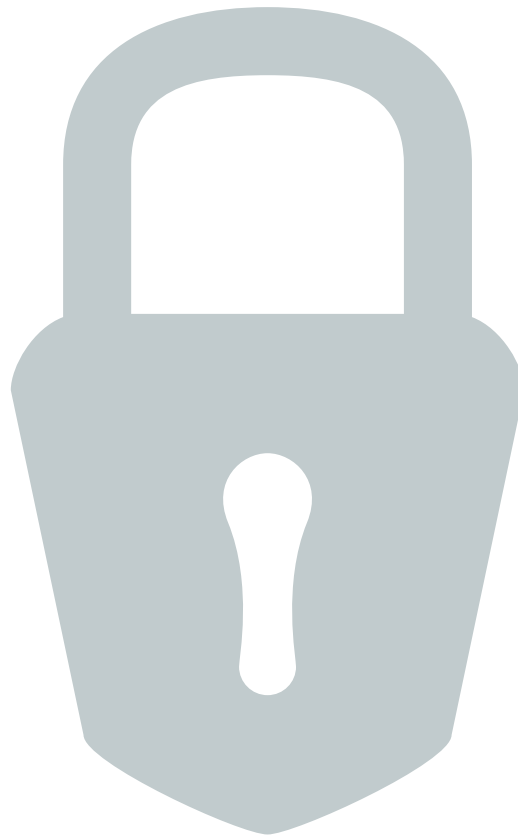

Nextech solutions have successfully completed a rigorous SOC 2, Type 2 examination under independent audit as part of a demonstrated commitment to security, resiliency and data privacy.

Data Encryption

All data is encrypted, at rest and in transit, on the cloud side as well as the user side, ensuring a high level of data security and HIPAA compliance.

Secure Environment

PHI data is not stored on computers or onsite servers, meaning a stolen business laptop or practice break-in will not result in a breach of protected data or fines for HIPAA violations.

Malware Recovery

Healthcare organizations are under constant threat of cyberattacks; but with a cloud solution, PHI is unaffected and recovery as simple as using an uninfected computer.

Disaster Recovery

Whether from a fire, earthquake, tornado or hurricane, regardless of the damage your practice could experience from a disaster, your data remains secure and unaffected in the cloud.

MAKE THE SWITCH TO CLOUD

To learn more about how making the switch to a cloud-based solution could improve your practice operations, **contact our team at (866) 857-8557**.
