

# CALIFORNIA LASIK & EYE

## Practice Profile

Located in Sacramento, California, California LASIK & Eye is a LASIK surgery and cosmetic services center. Founded by Dr. Brad Barnett, MD, PHD and his wife Kristen Barnett, NP-C—a spouse team—**California LASIK & Eye focuses on streamlined premium refractive surgery experiences and cosmetic procedures.**

### CHALLENGES

California LASIK & Eye wanted a streamlined charting experience that would not only increase their practice efficiency but could offer them a full package solution—handling everything from easy charting to automatic billing. Having used other systems that were clunky, like NextGen in prior practices, Dr. Barnett wanted to find a “top to front” integrated solution that would be the right fit for the practices’ growth and day-to-day efficiency.

**Dr. Brad Barnett, MD, PhD**  
California LASIK & Eye

*“Nextech offered a superior clinical experience in comparison to competitors. Partnering with Nextech allowed me to create a **robust system** that was going to **stay ahead of the times** and ensure that my practice and my patients are adequately cared for moving forward. I could not be happier with my decision and encourage others to make the same.”*

Keep reading to learn more about **The Nextech Difference** ►

*“From the moment our patients come in the door, **Nextech really allows us to integrate everything in one place.** So not only from making appointments, but from the front desk, taking our patients through testing to making a payment at the close of their visit.”* —**Kristen Barnett, NP-C**

# THE NEXTECH DIFFERENCE

*No matter what you're looking for in your practice software, **Nextech is dedicated to helping clients have the smoothest, easiest integration possible.** For a new practice like California LASIK & Eye, a simplified integration was put in place—so the practice had a complete solution working smoothly in real time as this new practice opened their office doors.*

## EASY > COMPLICATED

According to California LASIK & Eye, **Nextech was the best fit due to its simple sophistication.** Nextech has given thought to what should be included and what should be excluded. In many ways that's what makes Nextech different.

**No complication, just ease with the ophthalmology-specific EHR, PM, and integrated payments.** Keeping a streamlined system—from the front to the back end—was important to California LASIK & Eye because they wanted to not only provide the most efficient experience within their practice, but they wanted more time to focus on patient care.

## MIPS MAXIMIZATION

Nextech gives California LASIK & Eye **confidence in knowing if they are meeting MIPS qualities in real time** while generating patient notes. According to Dr. Barnett, Nextech does the homework for you, "I'm not thinking, I'm going to click this box so I can get my quality or my MIPS. I'm thinking

this is how I know it is laid out and how I collect information around what is requisite for MIPS. **The concern of meeting the right measures can disappear, you have the peace of mind knowing that you are staying compliant, and you can solely focus on the patient** and provide the care that you need to provide."

## ONE-OF-A-KIND SHARED CARE FUNCTIONALITY

**Through Nextech, ophthalmologists can easily connect through shared care functionality.** Whether you're looking for a specific answer to a question or trying to identify a specialist best fit for a patient, there's a lot of synergy between various practices using Nextech. The system continues to evolve for the various asks of different practices.

**Nextech makes it simple to stay connected with referring ophthalmologists.** "What I love is that it provides a system or a community where we're not against each other, but we're learning to work together to keep the patient in focus." Chart notes can be pushed to referring colleagues in a succinct and clear way so they can quickly see the salient points.

According to Dr. Brad Barnett, "The ability for us to effectively communicate with other practices and physicians in a seamless system is wonderful."
