

Experience the *simplicity* of ready-built, customizable templates *tailored to pediatric specialty needs*

PEDIATRIC-SPECIFIC PROFILE

Increase **charting efficiency** with a built-in, customizable pediatric profile that populates exam findings specific to sensorimotor exams.

PROBLEM-DRIVEN WORKFLOWS

Improve **documentation accuracy** with a customizable pediatric-focused complaint including patching hours, strabismus, glasses, and double vision.

PEDIATRIC SENSORIMOTOR EXAM

Spend less time reviewing data and **more face-to-face time with the kids**. Providers can pick up where they left off and easily pull forward previous exam measurements, tracking progress over time.

SPECIAL TESTINGS

Track **test finding over time** with defaults for color vision, stereo assessment, and Worth 4 Dot.

IMAGING

Easily **compare strabismus exams** including fundus photos, ROP drawings, visual field, and diagnostic images that can then be added to the system and uploaded directly into the chart.

INLINE DRAWING FOR ROP

Effortlessly **draw and document ROP findings** directly in the patient's chart, with features designed to capture detailed findings, streamline documentation, and enhance accuracy and consistency.

"Nextech's pediatric profile allows me to document accurately and specifically for each patient while closing well over 90% of my encounters before the patient has left the office. It's easy to accurately document findings to prepare treatment plans. There's no clicking back and forth between encounters when comparing visions from previous visits."

Dr. Alexander de Castro
Pediatric Eye Care
